1 Problem

Which of the following set of vectors

$$\alpha = (a_1, a_2..........a_n)$$

in $\mathbf{R^n}$ are subspace of $\mathbf{R^n}$ $(n \geq 3)$?
a)All α such that $a_1 \geq 0$
b)All α such that $a_1 + 3a_2 = a_3$
c)All α such that$a_2 = a_1^2$
d)All α such that $a_1a_2 = 0$
e)All α such that a_2 is rational

2 Solution

a) All α such that $a_1 \geq 0 \in \mathbf{R^n}$ $(n \geq 3)$
Let,

$$\alpha = (a_1, a_2, a_3, a_4.........., a_n) \in \mathbf{S}$$
$$(-\alpha) = (-a_1, -a_2, -a_3, ..., -a_n) \notin \mathbf{S} \tag{2.0.1}$$

From equation (2.0.1) it is not closed with respect to scalar multiplication and hence not a subspace.
b) All α such that $a_1 + 3(a_2) \in \mathbf{R^n}$ $(n \geq 3)$,
Let $c \in \mathbf{R}$

$$\alpha = (a_1, a_2, a_3, ..., a_n) \in \mathbf{S}$$
$$\beta = (b_1, b_2, b_3, ..., b_n) \in \mathbf{S} \tag{2.0.2}$$

Now, c.(α)+β

$$= c(a_1, a_2, a_3, ..., a_n) + (b_1, b_2, b_3, ..., b_n)$$
$$= (ca_1, ca_2, ca_3, ..., ca_n) + (b_1, b_2, b_3, ..., b_n) \tag{2.0.3}$$

Now, using condition $a_1 + 3(a_2)$ we have,

$$ca_1 + b_1 + 3(ca_2 + b_2) = ca_1 + b_1 + 3ca_2 + 3b_2$$
$$\implies c(a_1 + 3a_2) + (b_1 + 3b_2) = ca_3 + b_3 \tag{2.0.4}$$

From equation (2.0.4) it is closed under addition and scalar multiplication, hence it is a subspace.
c) All α such that $a_2 = {a_1}^2 \in \mathbf{R^n}$ $(n \geq 3)$,
Let,

$$\alpha = (a_1, a_1^2, a_3, a_4, ...a_n) \in \mathbf{S}$$
$$\beta = (b_1, b_1^2, b_3, b_4...b_n) \in \mathbf{S}$$

$$\implies \alpha + \beta = (a_1 + b_1, a_1^2 + {b_1}^2, a_3 + b_3, ...a_n + b_n) \notin \mathbf{S} \tag{2.0.5}$$

From equation (2.0.5) $(a_1 + b_1)^2 \neq a_1^2 + b_1^2$ it is not closed with respect to additions and hence not a subspace.
d) All α such that $a_1a_2 = 0 \in \mathbf{R^n}$ $(n \geq 3)$, Let,

$$\alpha = (0, a_1, 0, ...0) \in \mathbf{S}; \quad a_1 \neq 0$$
$$\beta = (b_1, 0, 0, ...0) \in \mathbf{S}; \quad b_1 \neq 0$$
$$\implies \alpha + \beta = (b_1, a_1, 0, ...0) \notin \mathbf{S} \tag{2.0.6}$$

From equation(2.0.6) $a_1b_1 \neq 0$ it is not closed with respect to addition and hence not a subspace.
e) All α such that $a_2$is rational $\in \mathbf{R^n}$ $(n \geq 3)$, Let,

$$\alpha = (0, a_1, 0, ...0) \in \mathbf{S}$$
$$b = \sqrt{2} \in \mathbf{R}$$
$$b.\alpha = (0, \sqrt{2}a_1, 0, ...0) \notin \mathbf{S} \tag{2.0.7}$$

From equation(2.0.7) it is not closed with respect to scalar multiplication and hence not a subspace.
